

Boston Light Path

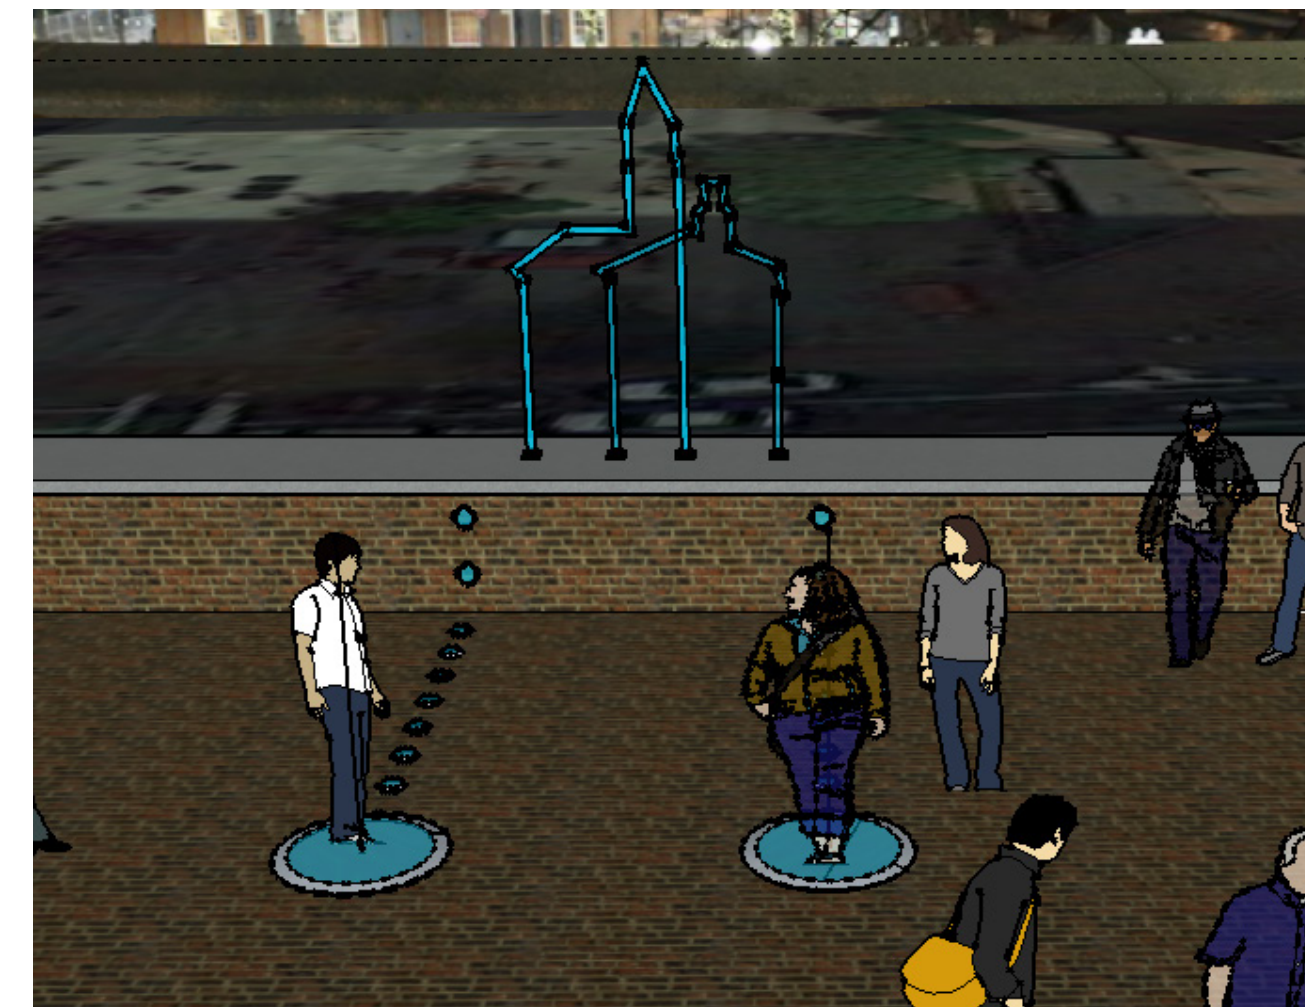

This interactive installation will work with spectators to challenge perspective, engage with other citizens in the community, and pay tribute to a historic and architectural landmark. Two people need to step on these pads simultaneously to light up the LED light paths. At first the paths may seem like a jumble of lines, yet from the perspective of the pads they perfectly outline Boston landmarks.

With little instruction, yet an obvious affordance to stand on each platform, people will be filled with a sense of wonderment and discovery upon solving this small “puzzle” to a Boston Landmark.

Key Dimensions

Light Outline: 6' width, 9' height

Pads: 3' diameter, 13' from wall

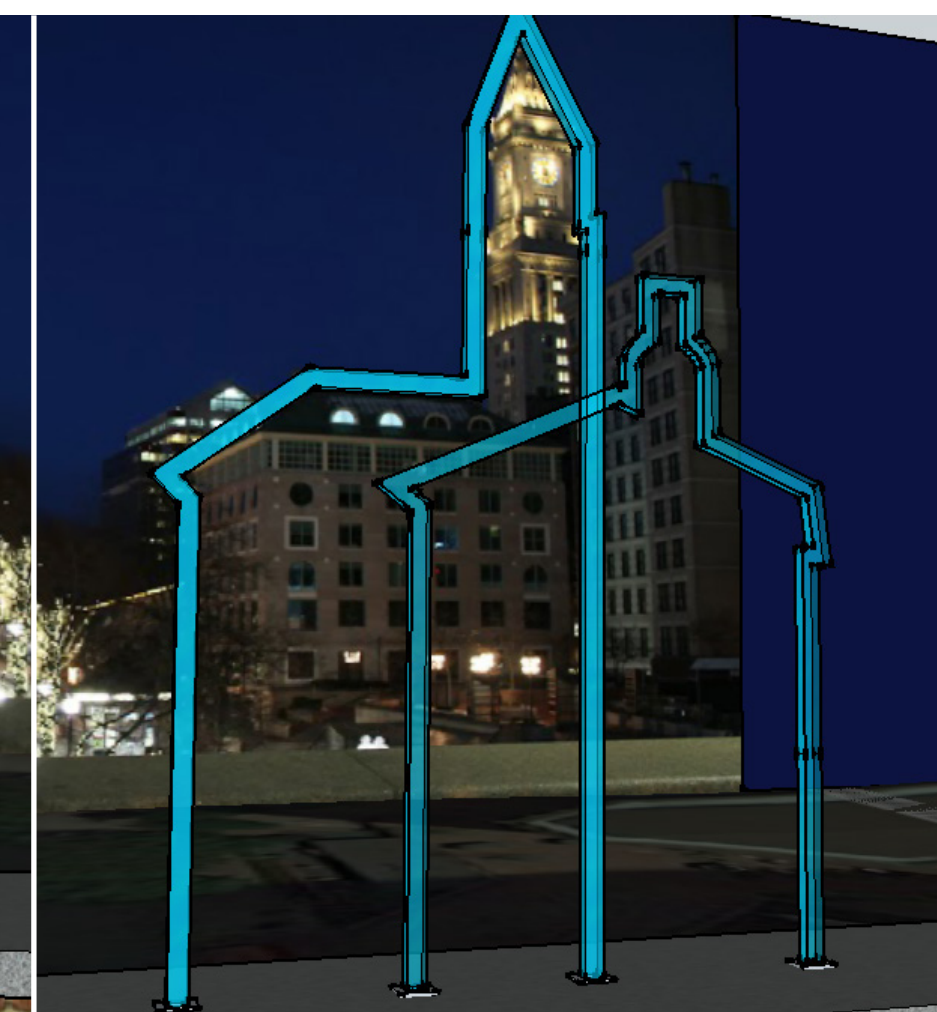

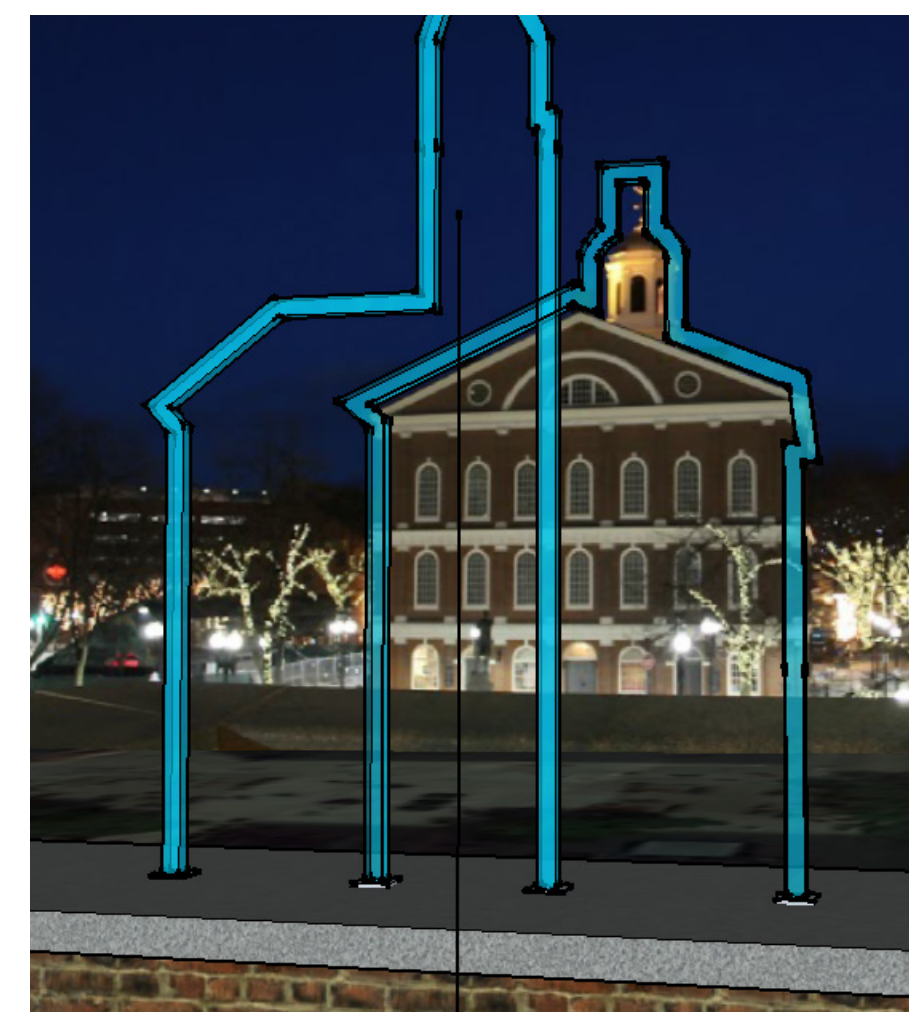

birds-eye view of installation

installation location

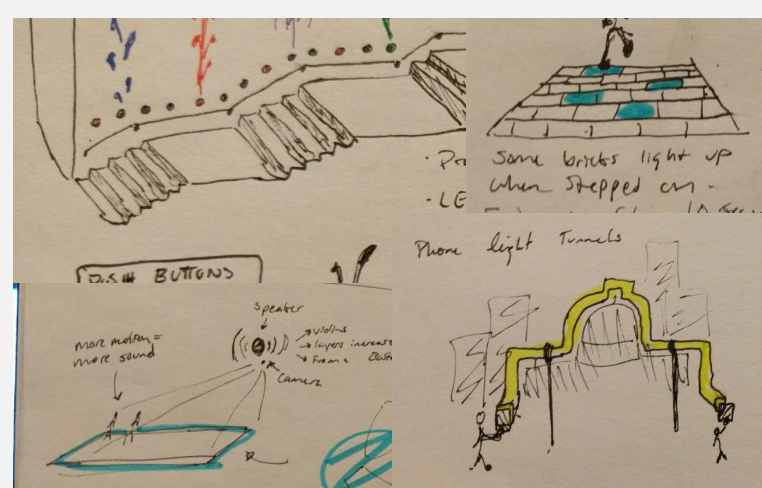

ground-level view of installation

perspective from each pad

Process

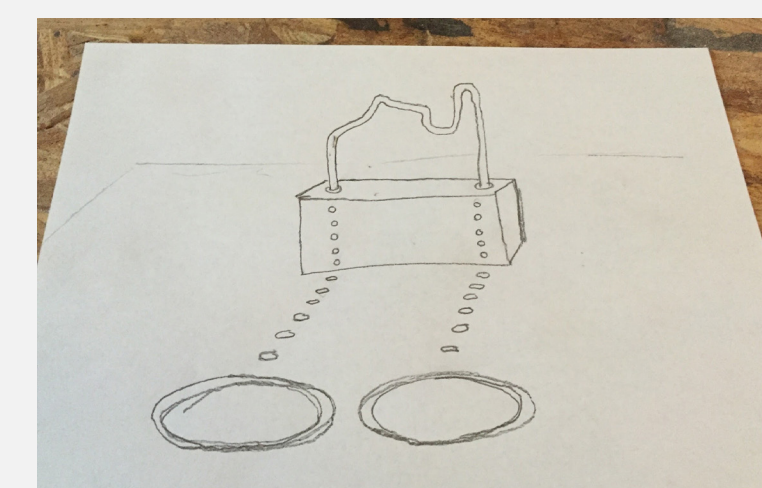

initial ideation & sketching

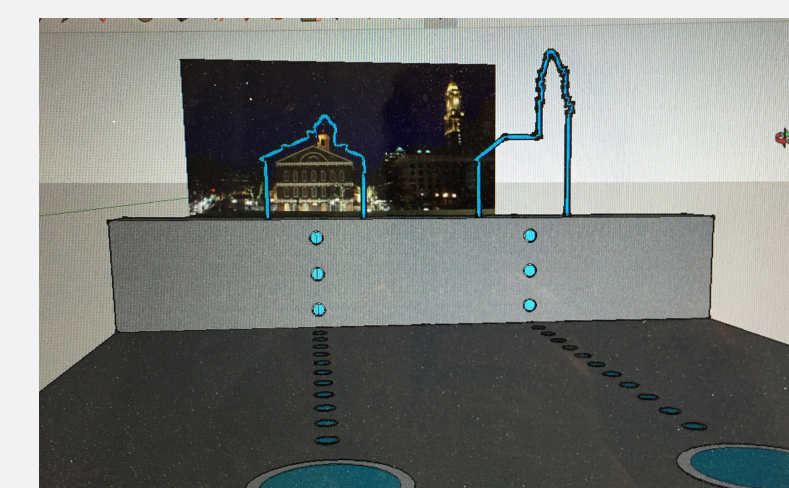

site visits

iteration: duct pipe

light pad ideation

initial light pad rendering
